# Welcome to the home of parklets

People Parkers have been installing and maintaining parklets in public spaces since 2015. We have worked with state governments, local councils, developers and major event organisers to provide tactical activations in the most high profile of locations. Our products are high quality, our expertise is wide ranging and our passion is for people oriented design. We are always looking for the next way to innovatively park people in public spaces.

Our products are manufactured in Australia, are designed for durability and ease of maintenance. All products have accompanying structural engineering certification for use in public space.

# Pergola Parklet

A covered outdoor parklet easily moved via truck

Our premium Pergola Parklet makes a large stylish covered parklet out of one parking bay. It provides space for the community, increases dwell time and in-turn local café or restaurant revenue. Used for permanent or temporary installations. The 9 metres of fixed benches plus placing additional table and chairs gives seating for 10-20 people. The roof provides shade, cooling and rain protection and solar lighting is optional. The metal frame and cladding separates traffic from the public. The low maintenance water reservoirs and wicking planters provides greenery that increases biodiversity, cools whilst softening the edge between road and public space.

# Patio Parklet

An open air parklet easily moved via truck

Our Patio Parklet converts a parking space into a large open air parklet. Perfect for increasing local business revenue and building community. Used for permanent or temporary installations. The 9 metres of fixed benches plus placing additional table and chairs gives seating for 10-20 people. Option to combine Patio Parklets together. Umbrellas, solar lanterns or shade cloth support poles can be placed in corners. The metal frame and cladding supply separation from traffic. The low maintenance water reservoirs and wicking planters provides greenery that increases biodiversity, cools whilst softening the edge between road and public space.

# Pergola and Patio specifications

Easy to install  
Transport via tilt tray truck.  
2 adjacent parking spots for unloading.
